Note

- ◆ Sub duct can be used for 4 directions independently or together.
- ◆ Be sure to seal off the air outlet of the indoor unit to which the sub duct is connected.
If not, it may cause water splattering and condensation.

Note

- ◆ ESP = External Static Pressure
- ◆ The graphs display the available external static pressure range of installed indoor units. Therefore, they do not reflect the actual change of external static pressure and airflow rate according to adjusted airflow (High-Mid-Low) of installed indoor units.

5-7. Recommended operation range

- ◆ Adjust option code according to the actual installation condition (external static pressure).

1 Space requirements

1-1. Single installation

* When the air outlet is opposite the wall

* When the air outlet is towards the wall

* When 3 sides of the outdoor unit are blocked by the wall

* The upper part of the outdoor unit and the air outlet is towards the wall

* The upper part of the outdoor unit and the air outlet is opposite the wall

* When front and rear side of the outdoor unit is towards the wall

1-2. Group installation

(Unit: mm)

* When the air outlet is towards the wall

* When 3 sides of the outdoor unit are blocked by the wall

* When front and rear side of the outdoor unit is towards the wall

* The upper part of the outdoor unit and the air outlet is towards the wall

* When front and rear side of the outdoor unit is towards the wall

Note

- ◆ The suggested installation above has concerned minimum installation space.
- ◆ To secure enough service space and performance of system, take account of more sufficient space.

Notes

- Voltage range
 - Units are suitable for use on electrical systems where voltage supplied to unit terminal is not below or above listed range limits
- Maximum allowable voltage variation between phases is 2%.
- Wire size & type must comply with the applicable local and national code.
 - Wire size : Based on the value of MCA.
 - Wire type : 60245 IEC57(IEC) or H05RN-F(CENELEC) grade or more.
- MFA is used to select the circuit breaker and the ground fault circuit interrupter(earth leakage circuit breaker).
- MCA represents maximum input current.
- MFA represents capacity which may accept MCA

Abbreviations

- MCA : Min. Circuit Amps. (A)
- MFA : Max. Fuse Amps. (A)

3-1. Power supply and communication cable configuration

► Two electronic cables must be connected to the outdoor unit.

- One is the connection cord between indoor unit and outdoor unit.
- Another is the power cable between outdoor unit and auxiliary circuit breaker.
- Specially for Russian and European market, before installation, the supply authority should be consulted to determine the supply system impedance to ensure compliance.

Caution

- ◆ During the unit installation make first refrigerant connections and then electrical connections. If unit is uninstalled first disconnect electrical cables, then refrigerant connections.
- ◆ Connect the air conditioner to grounding system before performing the electrical connection.
- ◆ When installing the unit, you shouldn't use inter connection wire.

1) When using ELB for 1 phase

2) When using ELB for 3 phase

* If an outdoor unit is installed in a place in danger of an electric leak or submergence, you must install the ELB.

3 Wiring works

3-2. Wiring diagram of power cable

Caution

- ◆ You should connect the power cable into the power cable terminal and fasten it with a clamp.
- ◆ The unbalanced power must be maintained within 2% of supply rating.
 - If the power is unbalanced greatly, it may shorten the life of the condenser. If the unbalanced power is exceeded over 4% of supply rating, the indoor unit is protected, stopped and the error mode indicates.
- ◆ To protect the product from water and possible shock, you should keep the power cable and the connection cord of the indoor and outdoor units within ducts. (with appropriate IP rating and material selection for your application)
- ◆ Ensure that main supply connection is made through a switch that disconnects all poles, with contact gap of a least 3 mm.
- ◆ Devices disconnected from the power supply should be completely disconnected in the condition of over voltage category.
- ◆ Keep distances of 50mm or more between power cable and communication cable.

3-3. Wiring diagram of connection cord

Note

- ◆ Lay the electrical wiring so that the front cover does not rise up when doing wiring work and attach the front cover securely.
- ◆ Ground wire for the indoor unit and outdoor unit connection cable must be clamped to a soft copper tin-plated eyelet terminal with M4 screw hole(NOT SUPPLIED WITH UNIT ACCESSORIES).

4-3. Insulation

- Insulate the gas side and liquid side pipe referring to the thickness according to the pipe size.
- Indoor temperature of 30°C and humidity of less than 85% is the standard condition. If installing in a high humidity condition, use one grade thicker insulator by referring to the table below. If installing in an unfavorable conditions, use thicker one.
- Insulator's heat-resistance temperature should be more than 120°C.

| Pipe | Pipe size | Insulation Type (Heating/Cooling) | | Remarks |
|-------------|----------------|-----------------------------------|-----------------------------------|---|
| | | Standard [30°C, less than 85%] | High humidity [30°C, over 85%] | |
| | | EPDM, NBR | | |
| Liquid pipe | Ø6.35 ~ Ø9.52 | 9t | 9t | Internal temperature is higher than 120°C |
| | Ø12.7 ~ Ø19.05 | 13t | 13t | |
| Gas pipe | Ø6.35 | 13t | 19t | Internal temperature is higher than 120°C |
| | Ø9.52 | | | |
| | Ø12.70 | | | |
| | Ø15.88 | | | |
| | Ø19.05 | 19t | 25t | |

Note

- ◆ When installing insulation in places and conditions below, use the same insulation that is used for high humidity conditions.
 - Geological condition:
High humidity places such as shoreline, hot spring, near lake or river, and ridge (when the part of the building is covered by earth and sand).
 - Operation purpose condition:
Restaurant ceiling, sauna, swimming pool etc.
 - Building construction condition:
The ceiling frequently exposed to moisture and cooling is not covered.
e.g. The pipe installed at a corridor of a dormitory and studio or near an exit that opens and closes frequently.
The place where the pipe is installed is highly humid due to the lack of ventilation system.

Caution

- ◆ The insulation has to be produced in full compliance of European regulation reg. EEC / EU 2037/2000 that requires the use of sheaths insulation form without using CFC and HCFC gases for health and the environment.

Caution

- ◆ Must fit tightly against body without any gap.

4-4. DPM Installation

1) Space requirements for indoor and outdoor units and piping installation

- Two indoor units should be installed in one area which is not divided by a wall.
- The distance between two indoor units should be within a straight-line of 10m.
- After branching, the distance between the piping connected to the two indoor units should be within 1m.
- The height difference between two units should be within 0.5m.
- Use the joint KIT that is only for DPM. (Please refer to the table below)

2) Connecting communication line and wired remote controller

► In case of 2 indoor units connection

► In case of 3 indoor units connection

► In case of 4 indoor units connection

* The wired remote controller can be used with any of the DPM indoor units.

Refrigerant piping works

3) Important information regulation regarding the refrigerant used

This product contains fluorinated greenhouse gases covered by the Kyoto Protocol. Do not vent gases into the atmosphere.

- Inform user if system contains 3 kg or more of fluorinated greenhouse gases. In this case, it has to be checked for leakage at least once every 12 months, according to regulation n°842/2006. This activity has to be covered by qualified personnel only. In case situation above (3 kg or more of R-410A), installer (or recognised person which has responsibility for final check) has to provide a maintenance book, with all the information recorded according to REGULATION(EC) N° 842/2006 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 17 May 2006 on certain fluorinated greenhouse gases.

This product contains fluorinated greenhouse gases covered by the Kyoto Protocol. Do not vent gases into the atmosphere.

- Please fill in with indelible ink,
 - ① the factory refrigerant charge of the product,
 - ② the additional refrigerant amount charged in the field and
 - ①+② the total refrigerant charge.

on the refrigerant charge label supplied with the product.

| Refrigerant type | GWP value |
|------------------|-----------|
| R410A | 1975 |

* GWP=Global Warming Potential

Contains fluorinated greenhouse gases covered by the Kyoto Protocol.

- The filled-out label must be adhered in the proximity of the product charging port (e.g. onto the inside of the stop valve cover).

4) How to Calculate the Quantity of Adding Refrigerant

The quantity of additional refrigerant is variable according to the installation situation. Thus, make sure the outdoor unit situation before adding refrigerant. This operation can only be performed by a qualified refrigeration specialist.

5) Set-up indoor unit quantity by key switch (K1, K2)

Press and hold K1 switch to enter the setting mode on the number of the installed indoor unit : Check "A0" sign on 7-segment

- Press K2 switch to set the number of the installed indoor unit :
 - Ex) If there are two indoor units, press K2 switch twice, and check "A2" sign on 7-segment.
 - If there are three indoor units, press K3 switch three times, and check "A3" sign on 7-segment.
 - If there are four indoor units, press K4 switch four times, and check "A4" sign on 7-segment.
- Press K1 switch to complete setting the number of the installed indoor unit : Check "AA" sign on 7-segment.

6) Operation and specification

- The two indoor units are equally controlled by wired and wireless remote controller.
(All controls such as ON/OFF, Cooling/Heating/Dehumidification/Ventilation,
High/Medium/Low wing, Fixing louver angle/swing are equally applied.)
- Thermo Off which stops when indoor temperature reaches set temperature works by the average sensor value of
the indoor temperature of two indoor units.
- When either of the two indoor units has a problem, the two indoor units protect operation or stop working.

7) Instruction for installation and operation

- You should install the DPM models according to the proper installation specification and eliminate the factors that give electrical load to the both indoor units when installing and operating.
(Heater/Window/Front door/Ventilation/Partition that divides space)
- You should provide sufficient instructions about the operation method and specification features to users and fill in caution phrases on wired remote controller when necessary.
(Ex. The air-conditioners in this area are special type to be controlled simultaneously)

5 Setting an indoor unit address & installation option

Set the indoor unit address and installation option with remote controller option.

Set the each option separately since you cannot set the ADDRESS setting and indoor unit installation setting option at the same time. You need to set twice when setting indoor unit address and installation option.

5-1. The procedure of option setting

Step 1. Entering mode to set option

- ① Remove batteries from the remote controller.
- ② Insert batteries and enter the option setting mode while pressing High Temp button and Low Temp button.

Check if you have entered the option setting status.

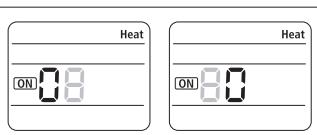

Step 2. The procedure of option setting

After entering the option setting status, select the option as listed below.

Step 3. Check the option you have set

After setting option, press button to check whether the option code you input is correct or not.

Step 4. Input option

Press operation button with the direction of remote control for set.
For the correct option setting, you must input the option twice.

Step 5. Check operation

- ①. Reset the indoor unit by pressing the RESET button of indoor unit or outdoor unit.
- ②. Take the batteries out of the remote controller and insert them again and then press the operation button.

5-2. Setting an indoor unit address (MAIN/RMC)

- 1) Check whether power is supplied or not.
- When the indoor unit is not plugged in, there should be additional power supply in the indoor unit.
- 2) The panel(display) should be connected to an indoor unit to receive option.
- 3) Before installing the indoor unit, assign an address to the indoor unit according to the air conditioning system plan.
- 4) Assign an indoor unit address by wireless remote controller.
- The initial setting status of indoor unit ADDRESS(MAIN/RMC) is "0A0000-100000-200000-300000".

5-3. Setting an indoor unit installation option (suitable for the condition of each installation location)

- 1) Check whether power is supplied or not.
- When the indoor unit is not plugged in, there should be additional power supply in the indoor unit.
- 2) The panel(display) should be connected to an indoor unit to receive option.
- 3) Set the installation option according to the installation condition of an air conditioner.
- The default setting of an indoor unit installation option is "02000-100000-200000-300000".
- Individual control of a remote controller(SEG20) is the function that controls an indoor unit individually when there is more than one indoor unit.
- 4) Set the indoor unit option by wireless remote controller.

5-4. Changing a particular option

You can change each digit of set option.

| Option | SEG1 | SEG2 | SEG3 | SEG4 | SEG5 | SEG6 |
|---------------------------|------|-------------------------|--|--|---|--|
| Explanation | PAGE | MODE | The option mode you want to change | The tens' digit of an option SEG you will change | The unit digit of an option SEG you will change | The changed value |
| Remote Controller Display | | | | | | |
| Indication and Details | 0 | Indication Details D | Indication Details Option mode 0~F | Indication Details Tens' digit of SEG 0~9 | Indication Details Unit digit of SEG 0~9 | Indication Details The changed value 0~F |

Note

- ◆ When changing a digit of an indoor unit address setting option, set the SEG3 as 'A'.
- ◆ When changing a digit of indoor unit installation option, set the SEG3 as '2'.

Ex) When setting the 'buzzer control' into disuse status.

| Option | SEG1 | SEG2 | SEG3 | SEG4 | SEG5 | SEG6 |

6-1. Error code

| Code | Meaning | Remarks |
|------|--|--|
| E201 | Unit quantity miss matching between indoor and outdoor. | Check indoor quantity setting in outdoor |
| E202 | Abnormal state, no communication between Indoor and Outdoor Main PCB | Check electrical connection and setting |
| E203 | 1min. Time out of communication error(Main Inverter) | Check electrical connection and setting |
| E221 | Outdoor temp sensor error | Check Outdoor sensor Open/Short |
| E231 | Cond. temp sensor error | Check Cond. sensor Open/Short |
| E251 | Discharge temp sensor error | Check Discharge sensor Open/Short |
| E320 | OLP Sensor Error | Check OLP sensor Open/Short |
| E403 | Detection of Outdoor Freezing when Comp. Stop | Check Outdoor Cond. |
| E404 | Protection of Outdoor Overload when Comp. Stop | Check Comp. when it start |
| E416 | Discharge temperature of a compressor in an outdoor unit is overheated. | |
| E440 | Heating operation is not available since the outdoor air temperature is over 30°C. | Heating |
| E441 | Cooling operation is not available since the outdoor air temperature is lower than -5°C. | Cooling |
| E458 | Outdoor unit BLDC Fan 1 or Fan 2 error | FAN1 error |
| E475 | | FAN2 error |
| E461 | Comp. Starting error | |
| E462 | Primary Current Trip error | |
| E463 | Over current trip / PFC over current error | Check OLP sensor |
| E464 | IPM(IGBT Module) Over Current(O.C) | |
| E465 | Comp. Over load error | |
| E466 | DC-Link voltage under/over error | Check AC Power or DC_Link voltage |
| E467 | Comp. wire missing error | Check Comp. wire |
| E468 | Current sensor error | Check Outdoor Inverter PBA |
| E471 | Outdoor EEPROM error | Check Outdoor EEPROM date |
| E474 | IPM(IGBT Module) or PFCM Temperature sensor Error | Check Outdoor Inverter PBA |
| E484 | PFC Overload Error | Check Outdoor Inverter PBA |
| E500 | IPM is over heated. | Check Outdoor Inverter PBA |
| E554 | GAS Leak error | Check indoor and outdoor unit model |
| E556 | Capacity miss match between indoor and outdoor | Check indoor and outdoor unit model |
